

INTERRUPTIONS (Pg. 12)

Duck Back*	If not yet activated and being shot at -> Move up to 10cm towards cover / away from the shooter. The shooter is entitled to a single shot, even if the target moves out of sight. Modifiers: -1 for the Move, a further -1 if target gets to substantial cover.
Quick Shot	If not yet activated and enemy activates -> take a single Shoot action against the activating enemy. The enemy character does not have to attack the interrupting character. If the enemy character is moving, the shot can be taken at any point during that movement. If the enemy character is shooting: - the quickshooter shoots first if enemy is at long range - the shooting is simultaneously if enemy is at close or point blank range

* May also be used to avoid hand to hand fighting.

If Duck Back and Quick Shot are combined (using the Joker), the shooting happens simultaneously. The quickshot target gets the -1 for the target moving, but no cover modifier (even if the quickshooter gets into substantial cover) (FAQ 1.1).

SHOOTING FROM HIGHER GROUND (Pg. 11)

Range	If shooter is 6+ cm higher than target, measure range at the level of the target (instead of from shooter to target).
Cover	If shooter is 6+ cm higher than target, ignore substantial cover (assuming cover isn't higher than chest height).

FALLING (Pg. 11)

Direction and Distance	Roll a D10. Direction is the facing of the upper dice point. Distance is the number in cm.
Falling Damage...	Default: make a D20 roll on the shooting table and apply the result.
... from more than 20cm	Roll twice on the shooting table and apply the result.
... off a moving vehicle	Roll twice on the shooting table and apply the result.
... after failing to mount/dismount a moving vehicle (incl. trains)	Default damage.
... off a horse	Default damage.
... while jumping	Default damage (unless height > 20cm). But no nerve test required (any hit leads to a fall).
... out of a window	Default damage (unless height > 20cm). But only fall if direction points out of the window (otherwise move character within the room).

HAND TO HAND FIGHTING (Pg. 15)

Initiate	Requires 2 actions: "Move" (into base to base contact) and "Fight" (start combat). Only 2 opponents may fight in a single HtH combat. Fighters may not be shot at.
First turn of fighting	Roll against each other with a D10 and the following modifiers: +1 for the character that initiated the hand to hand fighting this turn +1 for each Under Fire Marker the opponent has +1 if character is armed with a hand weapon +1 if character on higher ground (e.g. mounted on or jumping from a horse, building, wagon, etc.) The loser takes 1 Under Fire Marker per point of difference. In case of a draw, fight again next turn. If the attacker goes Out of Action, the defender has 2 actions left if not activated before the fight.
Consecutive turns of fighting	Both fighters get initiative cards. The higher one gets a +1 bonus for the fight. The fighter with higher initiative may brake off and move away using 2 Move actions. If both combatants survive, their remaining actions are lost. Only one fight / roll off per turn!
Fighting for Time	Declare defensive fighting before the dice rolls. Take one less Under Fire Marker if loosing. In case of a win, the opponent takes no damage at all.
Mounted characters	Mounted characters are dragged off their horse if loosing a fight. The horse is removed from play. If attacking with a lasso, the defender takes an Under Fire Marker if failing a Nerve test (only once).
Buildings / vehicles	Within 5cm of an edge, the winner may push their opponent off the roof / vehicle (must be declared before the roll off). Apply falling damage to the loser instead of HtH damage. If opponent is pushed towards another character, that character must pass a Nerve test or take an Under Fire Marker.

NERVE TESTS (Pg. 14)

Roll D10 against Nerve value.	Modifiers: -1 per Under Fire marker; +1 if friendly character within 15cm (max of +1).
Big Nerve Test: if > 50% of your characters are out of action (OOA) at the start of a turn.	Make a Nerve test based on the character with the best Nerve value in your gang (that is still alive). Apply a -1 penalty for each OOA character below 50% (e.g. 4 out of 7 OOA -> -1 penalty).
